Modules: Gobstones, JavaScript y Ruby

YoProgramo, *Ministerio de Producción de la Nación y la Cámara de Empresas de Software y Servicios Informáticos de Argentina (CESSI)* — current

Experience

Reservation Manager, *Postales Hotel Boutique* — 2020

Front-End Developer & Team Leader, *Madí* — 2022
Madí is an art e-commerce, focused on selling national paintings, sculptures and recycled art. It was a project of six people that lasted two months. We divided the team into two smaller groups, one in charge of the Back-End and the other of the Front-End. I had the honor to be the team-leader and also one of the Front-End Devs.
We used tools as Asana to create a schedule with tasks and set clear goals for each group. We dedicated the first fifteen minutes of every day to talk about what each team had done the day before and what were our goals that day. We wanted both teams to be heading the same direction and managing the same timeline.
We also used Figma to design and prototype the UX & UI design, something essential to the project because we manage to brought our ideas down to earth and saw them coming to life little by little during the whole process, always open to the possibility of changing if a better idea that went better with the project objective appeared.
For the development of the web page we used technogies as Java 8, OOP, MySQL, JPA,GIT, SpringBoot, HTML5, CSS3 and Bootstrap.

Front-End & UX-UI Dev, *Tast* — 2022
Tast is a website that I've created challenging myself to push my limits and go beyond my knowledge to acquiere new habilities related to Front-End Development, the field I'm specializing in.
Despite being alone in the process of the front development, I applied Kanban methodology. For the development of the site I used technologies such as JavaScript, GIT, HTML5, CSS3, Masonry JS, Bootstrap 3 and Vercel. I also aimed to create a full-responsive page, something that was succesfully achieved.

Back-End & Front End WordPress Dev, *Del campo al mercado*   current
- Meeting with clients to discuss website design and function.
- Designing and building the website front-end.
- Creating the website architecture.
- Designing and managing the website back-end including database and server integration.
- Generating WordPress themes and plugins.
- Conducting website performance tests.
- Troubleshooting content issues.
- Conducting WordPress training with the client.
- Monitoring the performance of the live website.

Skills
