Profile

I'm a curious person, always eager to learn new things that contribute to my growing as a professional and as a person. I have strong interpersonal skills such as emotional intelligence, having the ability to identify, understand and manage myself and others' emotions; communication skills: being conscious of what I say and how I say it, and also of the things I communicate with my body through paralinguistics. One of the things I enjoy the most about being a programmer is team work. In my experience, working with others to identify, define and solve problems having a common aim shape all the other skills.

Education

Full Stack Web Developer, *Egg Cooperation* ⧉   2021 Jul – 2022 Jun
Intensive Diploma in Full Stack Web Programming in Java & Spring.   Mendoza, Argentina

SéProgramar, *Ministerio de Producción de la Nación y la Cámara de Empresas de*   2022
Software y Servicios Informáticos de Argentina (CESSI)
Modules: Gobstones, JavaScript y Ruby

Professional Experience

Madí, *Front-End Developer & Team Leader*   2022
Madí is an art e-commerce, focused on selling national paintings, sculptures and recycled art. It was a project of six people that lasted two months. We divided the team into two smaller groups, one in charge of the Back-End and the other of the Front-End. I had the honor to be the team-leader and also one of the Front-End Devs.
We used tools as Asana to create a schedule with tasks and set clear goals for each group. We dedicated the first fifteen minutes of every day to talk about what each team had done the day before and what were our goals that day. We wanted both teams to be heading the same direction and managing the same timeline.
We also used Figma to design and prototype the UX & UI design, something essential to the project because we manage to brought our ideas down to earth and saw them coming to life little by little during the whole process, always open to the possibility of changing if a better idea that went better with the project objective appeared.
For the development of the web page we used technogies as Java 8, OOP, MySQL, JPA,GIT, SpringBoot, HTML5, CSS3 and Bootstrap.

Tast, *Front-End & UX-UI Dev*   2022
Tast is a website that I've created challenging myself to push my limits and go beyond my knowledge to acquiere new habilities related to Front-End Development, the field I'm specializing in.
Despite being alone in the process of the front development, I applied Kanban methodology. For the development of the site I used technologies such as JavaScript, GIT, HTML5, CSS3, Masonry JS, Bootstrap 3 and Vercel. I also aimed to create a full-responsive page, something that was succesfully achieved.

Encriptador (First Challenge #ONE), *Web Developer*   2022
The challenge is about developing an aplication that encrypt text, so users can send messages to each other without fear of being read. With a responsive design in HTML, CSS & JavaScript.

Barbería Alura, *Front-End Developer*   2022

Barbería Alura is the first HTML & CSS project for ONE, the education program of Oracle + Alura.

We build the page from the scratch. In order to do it we take and pass the following courses:

- HTML5 & CSS3 I: My first web page.
- HTML5 & CSS3 II: Advanced CSS.
- HTML5 & CSS3 III: Working with Forms and Tables.
- HTML5 & CSS3 IV: Positions, lists and navegation.

Skills

Soft skills

Assertive communication, empathy, collaborating with others, giving and receiving effective feedback, emotional intelligence, conflict resolution skills.

Hard skills

Java 8, JavaScript, Ruby, OOP, MySQL, SQL, JDBC, JPA, GIT, Spring Boot, HTML5, CSS3 and Bootstrap
